Instructions

Use the playbar at the bottom to pause a section as you go along if you need more time. Be sure to indicate that you understood the material at the end to receive credit. For more information about this course, click here.
In 2015 Duke sustained over $260,000 in property damage from fires that could have been avoided.

This module will show you what to be aware of in your workplace and how to react in the event of a fire. Don’t become a statistic.
Be aware of the location of the fire equipment in your work area. These include:
Sprinklers

Your work area may have covered sprinklers or no sprinklers.
Your closest Fire Extinguisher and nearest Exit.

Duke Occupational & Environmental Safety Office

Notes:
Report blocked fire equipment or exits to your supervisor, or correct the condition.
Correct or report fire hazards like potential fuel sources and flammables that are not properly stored.
Also correct or report potential heat sources such as frayed wires and daisy chaining extension cords.
You can be proactive in being prepared for a fire by

- reviewing your site-specific fire plan
- making sure you know where the emergency assembly point is
- annual fire drill practice.
<table>
<thead>
<tr>
<th>Awareness</th>
<th>Be Prepared</th>
<th>RACE</th>
<th>PASS</th>
</tr>
</thead>
</table>

In case of a fire, the acronym **RACE** helps you remember what to do.
Remove all personnel from the area.

Alarm - sound the fire alarm and call 911.

Close doors but don’t lock them.

Evacuate using the stairs.
If you have to use a fire extinguisher, the acronym **PASS** will walk you through the steps.
Pull the pin
Aim at the base of the fire
Squeeze the handle
Sweep from side to side
