

OESO FIRE SAFETY CONSTRUCTION BOARD

Fire safety information is provided on all construction and renovation sites where evacuation or other life safety measures are affected. This is accomplished by having a central information center known as the OESO Fire Safety Construction Board.

Procurement and installation of the board is the responsibility of the Project Coordinator. Boards are manufactured by the West Main Street Alterations and Renovations Shop with the cost to be charged to the respective project.

This is a wooden board measuring 24" high by 46" wide with a 1/4" plywood backing, a 3/4" border, and a 5/8" vertical divider midway in the board which creates two equal display sections.

The materials on the left section are general information and are covered with 1/8" Plexiglas.

When facing the board, the left section contains the following:

- (1) Interim life safety measures (ILSM),
- (2) P.A.S.S. Procedures - Illustrations - English and Spanish,
- (3) Fire Extinguisher Classifications - Illustrations - English and Spanish,
- (4) R.A.C.E. Procedures - English and Spanish,
- (5) Daily on-site safety checklist,
- (6) Fire alarm code identification listing:

?? Duke North Hospital,	?? Duke North MRI,
?? Duke South Clinic,	?? Eye Center,
?? Clinical and Research Laboratory Building (CARL).	

The right side of the board is uncovered and contains:

- (1) A site-specific fire plan (provided by OESO prior to project start) for the construction site which indicates:

?? Site location,	?? Exits,
?? Pull stations,	?? Fire extinguishers,
?? Site-specific fire alarm code numbers,	?? Other emergency numbers.
- (2) Names and contact numbers for construction personnel for after-hour and weekend callback.
- (3) Space for hot work permits and city permits.
