WHAT IS A TSCA INVENTORY?

Any chemical substance manufactured or processed in the United States is listed by either a specific chemical name or by a Chemical Abstract Service (CAS) number (if it’s identity is not confidential) by the EPA under Section 8(b) of TSCA.

Prior to submitting a PMN, anyone who plans to manufacture or import a chemical substance must determine if said substance is already listed in the public TSCA Inventory. If said substance is not listed in the public TSCA Inventory, a request should be submitted to the EPA to determine if it is listed in the confidential TSCA Inventory.
