Use of stool height chairs with step platforms are recommended for their added stability and ease in which employees can get on/off them (refer to the example below). Use of stool height chairs without a step platform should be avoided, as employees would be sitting at elevated heights, with the potential for falls. If they are to be used, the use of braking casters for safety is strongly recommended, with rubber casters used for hard floors.

Note: Consult with the chair vendors on back height, seat height and size, and arm options for each chair listed below. Click here for the list of vendors.

If sitting in a stool height chair for 4 or more hours, an industrial height foot rest must be available ([https://www.safety.duke.edu/ergonomics/computer-ergonomics/footrests](https://www.safety.duke.edu/ergonomics/computer-ergonomics/footrests)). Additionally, an attached foot ring should be present and be easily height adjustable.
