This product is a state-of-the-art fixative that allows you to perform all the tasks you previously performed with formalin, without the risk and the high cost of disposal. Scientific Device Laboratory is now the exclusive manufacturer of NOTOXhisto.

Unlike formaldehyde, antigenic sites and DNA are unaltered. All sizes of specimens ranging from small sections to whole organs can be fixed in NOTOXhisto. Due to a unique blend of protein modifiers and stabilizers, NOTOXhisto has the ability to both fix and preserve tissue. In addition, NOTOXhisto performs extremely well with immunohistochemical staining. You will get superior results with in-situ hybridization and PCR techniques. There is no pre-mixing or dilution, NOTOXhisto is ready-to-use. Use NOTOXhisto as you would formalin, without change in processing or staining protocols. You will find NOTOXhisto easier to work with than strictly regulated, toxic formaldehyde.

No disposal fees make this product even more cost-efficient. For your convenience, NOTOXhisto is packaged in a variety of volumes. Call our offices to inquire about custom needs.
